

# ***Low Maintenance***

*Set It and Forget It*

## QUESTIONS?

- 1 How often do solar panels need maintenance?
- 2 Should I get on the roof and clean my panels?
- 3 How long do solar panels last?

### **How often do solar panels need maintenance?**

Solar panels need very little maintenance. Once a year, take a moment to visually inspect your panels from the ground- to check for damage. Monitoring your solar panel system's performance and being aware of its electricity production is crucial to catch and address any problems early.

### **Should I get on the roof and clean my panels?**

No, it's not recommended to climb onto your roof to clean your solar panels. Instead, contact a solar professional for maintenance. Keep in mind, solar panels typically continue to work well even if some dirt or pollen accumulates.

### **How long do solar panels last?**

Most solar panels last 25–30 years or more, often with warranties covering 20–25 years.
